Title: Linux Command List Assessment

Instructions:-

The following assessment aims to test your understanding and practical knowledge of various Linux commands. Perform the tasks given below using the appropriate commands. Write down the command(s) used to complete each task. You can use any Linux distribution or command-line interface of your choice. Ensure that you provide the correct output or results for each task.

Note: It is recommended to perform this assessment on a Linux machine or virtual environment.

File and Directory Operations:

ls: List files and directories

```

apt-get: Package management for Debian-based distributions

```
File Actions Edit View Help
(kali@kali)-[~]
$ apt-get
apt 2.4.5 (amd64)
Usage: apt-get [options] command
       apt-get [options] install|remove pkg1 [pkg2 ...]
       apt-get [options] source pkg1 [pkg2 ...]

apt-get is a command line interface for retrieval of packages
and information about them from authenticated sources and
for installation, upgrade and removal of packages together
with their dependencies.

Most used commands:
update - Retrieve new lists of packages
upgrade - Perform an upgrade
install - Install new packages (pkg is libc6 not libc6.deb)
reinstall - Reinstall packages (pkg is libc6 not libc6.deb)
remove - Remove packages
purge - Remove packages and config files
autoremove - Remove automatically all unused packages
dist-upgrade - Distribution upgrade, see apt-get(8)
dselect-upgrade - Follow dselect selections
build-dep - Configure build-dependencies for source packages
satisfy - Satisfy dependency strings
clean - Erase downloaded archive files
autoclean - Erase old downloaded archive files
check - Verify that there are no broken dependencies
source - Download source archives
download - Download the binary package into the current directory
changelog - Download and display the changelog for the given package

See apt-get(8) for more information about the available commands.
Configuration options and syntax is detailed in apt.conf(5).
Information about how to configure sources can be found in sources.list(5).
Package and version choices can be expressed via apt_preferences(5).
```

systemctl: Manage system services

```

```
File Actions Edit View Help
GNU nano 6.2 /tmp/crontab.wQLROu/crontab
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# h dom mon dow   command
```

useradd: Add a new user

```
File Actions Edit View Help
└─$ useradd
Usage: useradd [options] LOGIN
       useradd -D
       useradd -D [options]

Options:
  --badnames          do not check for bad names
  -b, --base-dir BASE_DIR    base directory for the home directory of the
                           new account
  --btrfs-subvolume-home    use BTRFS subvolume for home directory
  -c, --comment COMMENT    GECOS field of the new account
  -d, --home-dir HOME_DIR   home directory of the new account
  -D, --defaults          print or change default useradd configuration
  -e, --expiredate EXPIRE_DATE    expiration date of the new account
  -f, --inactive INACTIVE    password inactivity period of the new account
  -g, --gid GROUP          name or ID of the primary group of the new
                           account
  -G, --groups GROUPS      list of supplementary groups of the new
                           account
  -h, --help              display this help message and exit
  -k, --skel SKEL_DIR      use this alternative skeleton directory
  -K, --key KEY=VALUE      override /etc/login.defs defaults
  -l, --no-log-init        do not add the user to the lastlog and
                           faillog databases
  -m, --create-home        create the user's home directory
  -M, --no-create-home     do not create the user's home directory
  -N, --no-user-group      do not create a group with the same name as
                           the user
  -o, --non-unique         allow to create users with duplicate
                           (non-unique) UID
  -p, --password PASSWORD  encrypted password of the new account
  -r, --system             create a system account
  -R, --root CHROOT_DIR    directory to chroot into
  -P, --prefix PREFIX_DIR  prefix directory where are located the /etc/* files
  -s, --shell SHELL        login shell of the new account
```

passwd: Change user password

```
(kali㉿kali)-[~]
└─$ passwd
Changing password for kali.
Current password: 
```

Ensure that you provide the correct command(s) used to accomplish each task.
Write your answers below each task.

Once you have completed the assessment, review your answers and verify that the output or results are correct.

Make this in document format and send them with images
