

Affected Items Report

Acunetix Security Audit

25 June 2023

Scan of http://ncte.org.in

Scan details

| | |
|------------------|-------------------------|
| Scan information | |
| Start time | 24/06/2023, 23:15:45 |
| Start url | http://ncte.org.in |
| Host | http://ncte.org.in |
| Scan time | 888 minutes, 30 seconds |
| Profile | Full Scan |

Threat level

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts distribution

| | |
|--|----|
| Total alerts found | 42 |
|  High | 1 |
|  Medium | 4 |
|  Low | 31 |
|  Informational | 6 |

Affected items

| | |
|---------------------------------|---|
| Web Server | |
| Alert group | Insecure CORS configuration |
| Severity | High |
| Description | <p>CORS (Cross-Origin Resource Sharing) defines a mechanism to enable client-side cross-origin requests. This application is using CORS in an insecure way. The web application returns the following headers:</p> <ul style="list-style-type: none">• Access-Control-Allow-Credentials: true• Access-Control-Allow-Origin: copy of the Origin header from request <p>In this configuration any website can issue requests made with user credentials and read the responses to these requests.</p> |
| Recommendations | Allow only selected, trusted domains in the Access-Control-Allow-Origin header. |

| | |
|---------------------------------|---|
| Web Server | |
| Alert group | HTML form without CSRF protection |
| Severity | Medium |
| Description | <p>This alert requires manual confirmation</p> <p>Cross-Site Request Forgery (CSRF, or XSRF) is a vulnerability wherein an attacker tricks a victim into making a request the victim did not intend to make. Therefore, with CSRF, an attacker abuses the trust a web application has with a victim's browser.</p> <p>Acunetix found an HTML form with no apparent anti-CSRF protection implemented. Consult the 'Attack details' section for more information about the affected HTML form.</p> |
| Recommendations | <p>Verify if this form requires anti-CSRF protection and implement CSRF countermeasures if necessary.</p> <p>The recommended and the most widely used technique for preventing CSRF attacks is know as an anti-CSRF token, also sometimes referred to as a synchronizer token. The characteristics of a well designed anti-CSRF system involve the following attributes.</p> <ul style="list-style-type: none">• The anti-CSRF token should be unique for each user session• The session should automatically expire after a suitable amount of time• The anti-CSRF token should be a cryptographically random value of significant length• The anti-CSRF token should be cryptographically secure, that is, generated by a strong Pseudo-Random Number Generator (PRNG) algorithm• The anti-CSRF token is added as a hidden field for forms, or within URLs (only necessary if GET requests cause state changes, that is, GET requests are not idempotent)• The server should reject the requested action if the anti-CSRF token fails validation <p>When a user submits a form or makes some other authenticated request that requires a Cookie, the anti-CSRF token should be included in the request. Then, the web application will then verify the existence and correctness of this token before processing the request. If the token is missing or incorrect, the request can be rejected.</p> |

| Not available in the free trial | |

| | |
|---------------------------------|---|
| Web Server | |
| Alert group | Same site scripting |
| Severity | Medium |
| Description | <p>Tavis Ormandy reported a common DNS misconfiguration that can result in a minor security issue with web applications.</p> <p>"It's a common and sensible practice to install records of the form "localhost. IN A 127.0.0.1" into nameserver configurations, bizarrely however, administrators often mistakenly drop the trailing dot, introducing an interesting variation of Cross-Site Scripting (XSS) I call Same-Site Scripting. The missing dot indicates that the record is not fully qualified, and thus queries of the form "localhost.example.com" are resolved. While superficially this may appear to be harmless, it does in fact allow an attacker to cheat the RFC2109 (HTTP State Management Mechanism) same origin restrictions, and therefore hijack state management data."</p> |
| Recommendations | It is advised that non-FQ localhost entries be removed from nameserver configurations for domains that host websites that rely on HTTP state management. |

| | |
|---------------------------------|--|
| Web Server | |
| Alert group | Clickjacking: X-Frame-Options header missing |
| Severity | Low |
| Description | <p>Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.</p> <p>The server didn't return an X-Frame-Options header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.</p> |
| Recommendations | Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header. |

| | |
|---------------------------------|---|
| Web Server | |
| Alert group | Cookie(s) without HttpOnly flag set |
| Severity | Low |
| Description | This cookie does not have the HTTPOnly flag set. When a cookie is set with the HTTPOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies. |
| Recommendations | If possible, you should set the HTTPOnly flag for this cookie. |

| | |
|---------------------------------|--|
| Web Server | |
| Alert group | Documentation file |
| Severity | Low |
| Description | A documentation file (e.g. readme.txt, changelog.txt, ...) was found in this directory. The information contained in these files could help an attacker identify the web application you are using and sometimes the version of the application. It's recommended to remove these files from production systems. |
| Recommendations | Remove or restrict access to all documentation file accessible from internet. |

|---------------------------------|---|
| Web Server | |
| Alert group | Possible virtual host found |
| Severity | Low |
| Description | <p>Virtual hosting is a method for hosting multiple domain names (with separate handling of each name) on a single server (or pool of servers). This allows one server to share its resources, such as memory and processor cycles, without requiring all services provided to use the same host name.</p> <p>This web server is responding differently when the Host header is manipulated and various common virtual hosts are tested. This could indicate there is a Virtual Host present.</p> |
| Recommendations | Consult the virtual host configuration and check if this virtual host should be publicly accessible. |

| Not available in the free trial | |

| | |
|---------------------------------|--|
| Web Server | |
| Alert group | WordPress admin accessible without HTTP authentication |
| Severity | Low |
| Description | It's recommended to restrict access to the WordPress administration dashboard using HTTP authentication. Password protecting your WordPress admin dashboard through a layer of HTTP authentication is an effective measure to thwart attackers attempting to guess user's passwords. Additionally, if attackers manage to steal a user's password, they will need to get past HTTP authentication in order to gain access to WordPress login form. |
| Recommendations | Add server-side password protection (such as BasicAuth) to the /wp-admin/ directory. Consult web references for more information. |

| | |
|---------------------------------|--|
| Web Server | |
| Alert group | Password type input with auto-complete enabled |
| Severity | Informational |
| Description | When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache. |
| Recommendations | <p>The password auto-complete should be disabled in sensitive applications. To disable auto-complete, you may use a code similar to:</p> <pre><INPUT TYPE="password" AUTOCOMPLETE="off"></pre> |
